

New Wave

Model ET701 Dialer

- Telephone Line Powered
- Non-Volatile Memory
- Easy To Program
- FCC Approved

Features

Simple Installation

- Small enclosure mounts almost anywhere.
- Telephone line powered for easy wiring and installation.
- Acts as combination emergency dialer and junction box.

Simple Programming

- Easy on-site programming with integrated keypad and controls - no extra tools or parts required.

The New Wave™ Model ET701 Dialer is a single number automatic dialer, designed to work directly with our ET501 series phones. It is also compatible with handset phones and other emergency phones. The compact unit acts as a junction box for multiple phone installations, and can replace many older style pin type dialers.

Programming is done with the built-in keypad. It can dial up to 20 digits, making it compatible with long distance dialing services and most PBX systems. The emergency telephone number is stored in non-volatile memory, which means that even if the phone line is disconnected for any period of time, the dialer will retain the programmed number. The New Wave™ requires no batteries or external power, so it is completely maintenance free.

Designed for:

Elevators • Areas of Rescue • Parking Garages
Campus Security • ATM's • Poolside • Entrance
... many other applications
